

CA2 physiology check: excitation alone does not validate the circuit

Responses almost overlap

Inhibition is much weaker

Model: seed 20; 1,940 CA3 afferents; RK4 10 substeps/ms; first 128 CA2 cells.

Model measure: minimum intact-minus-blocked mean waveform. Experiment: $n=7$, mean $\pm$ SEM (Chevalleyre & Siegelbaum, 2010, Fig. 3).
